

HOW TO KNOW IF IT'S TIME TO

REPLACE YOUR HVAC SYSTEM

HVAC systems are amazing, but they're also pretty hard to keep up with. Do you know when to replace your HVAC system? Answer the questions below to find out!

1

Is your system over 10 years old?

The older a unit is, the more expensive repairs will be—and the more likely they'll be needed.

2

Does your system require frequent repairs?

If repairs to your system become too frequent or expensive, it may be time for an HVAC upgrade.

3

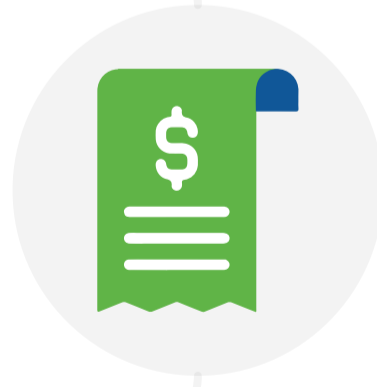

Is your home no longer comfortable?

If you're having trouble staying cool in the summer or warm enough in the winter, it could be that your unit can't keep up anymore.

4

Are your utility bills higher than normal?

If your monthly utility bill is much higher than usual, there could be several reasons why this is happening—including an inefficient HVAC system that needs replacing.

5

Does the system sound louder than normal?

HVAC systems are designed to run quietly. If your HVAC unit starts making strange noises, it could mean something is wrong.

● Replace

If you answered yes to one or more of these questions, it might be time to consider replacing your system.

● Repair

If you answered no to all of these questions, your system might just need to be repaired!
